Eel Farming

Feeding

Harvesting &  
Packaging

Price  
Overview

輸出可能数量：30トン／月

# Eel Farming

- First stage of farming: Glass eel/Elvers (young eels) with length:  $\pm$  6 cm and weight: 1-2 gr.
- Young eels were caught naturally without bait by netting, in the shores and estuaries.

# Eel Farming

- Pond set-ups with square net (2 m x 7 m x 0.7 m) underneath.
- Recirculation system: A flow-through system that circulates clean water continuously, by installing a water drain pipe.
- The temperature of the water must be kept between 23-28°C to ensure optimal growth and health of the eel.

# Feeding

- Food for young and adult eels: Paste or pellets with 42.12% protein content. The food consists of high-quality fish meal, bran, and other ingredients that contain nutrients to produce optimal growth.
- There is no use of drug and synthetic vitamin during the cultivation of eels.

# Harvesting & Packaging

## Harvesting

- Harvesting size: 200 - 300 gr or as per customer's need
- The net under the pond is lifted and pulled up to one side of the pond, so the eels gather in one spot.
- Eels that are ready for harvesting are put into tanks with clean water to flush out any possible impurities in their systems that could affect the taste. Their food is also stopped 1-2 days prior to harvest.
- Perform suspended animation: Lower the pond temperature to 19-22°C by putting ice block inside the pond, then the eel will be under asphyxia condition.

## Styrofoam Box AG75 Garuda

## Packaging

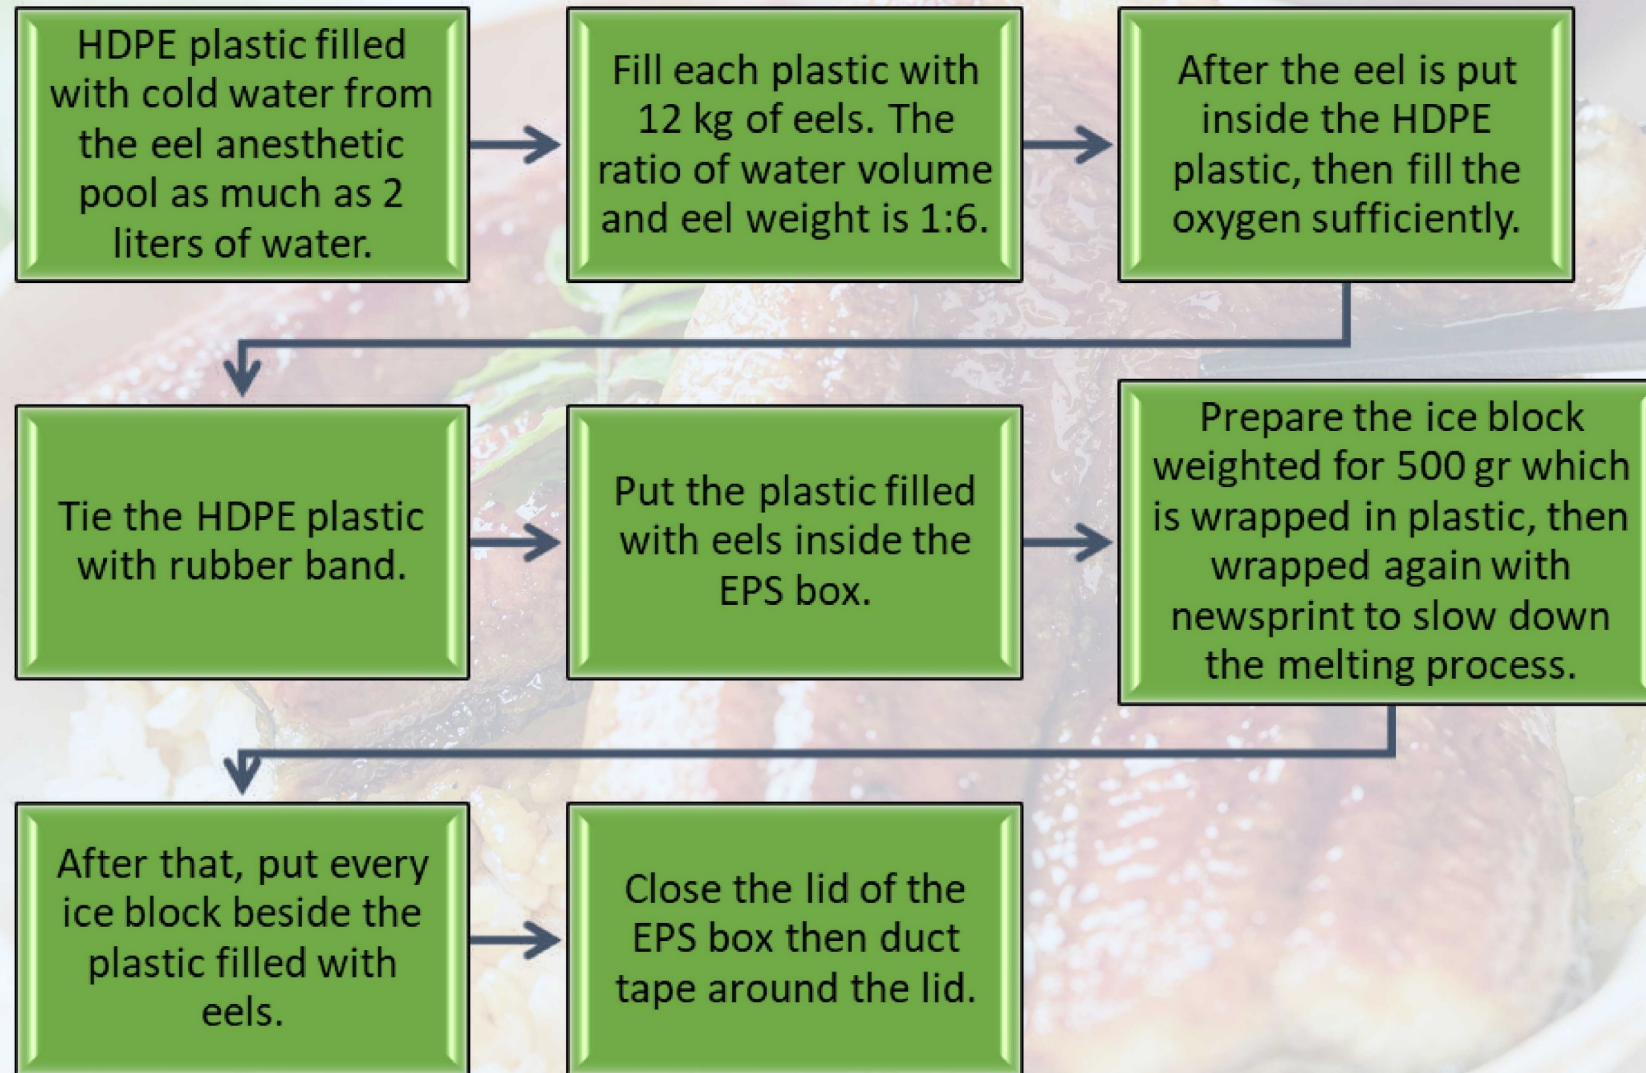

### A. Tools and Materials

1. High-Density Polyethylene (HDPE) Plastic
2. Rubber Band
3. Expanded Polystyrene (EPS) Box AG75 Hard Density 35 (outer dimension = 75 x 42 x 32 cm; Inner dimension = 68.5 x 35.5 x 26.5 cm; thickness = 3 cm), which is approved by Garuda Airlines.
4. Duct Tape
5. Newsprint
6. Oxygen
7. 4 pieces of ice block @ 500 gr
